Verification of Contractor Activities, Elkhart, Indiana

Kenneth M. Theisen, On-Scene Coordinator
Emergency & Enforcement Response Branch

Chuck McKinley

As per our conversation of March 9, 1989 you should have received copies of specific invoices from sub-contractors relating to activities from various plumes of ground water contamination in Elkhart, Indiana.

If more specific information is needed (i.e. exact dates of a specific activity) these will have to be pursued through the individual sub-contractors via a daily work order given to the construction crews or some other such vehicle.

To the best of my recollection: The west end of the East Jackson plume completed hookups in March and April of 1986. However the one residence on 183 Foster did some work in August 1986.

The East end of the East Jackson area completed hookups about the same time (March and April 1986) however, landscaping work did take place into June and July.

The same is true of the Denver and Rice street plume with landscaping being the last activity completed, in June or July.

As usual, contact me if more information is needed.
